

FVQ_CYP (10-15 years)

An age-appropriate measure of functional vision (FV) for self-reporting by visually impaired (VI) children and young people.

Functional Vision Questionnaire for Children and Young People with Visual impairment (10-15 years)

This has been replaced with an updated version found [here](#).

Product Description

A novel, psychometrically robust self-report questionnaire for children and young people-the FVQ_CYP-that captures the functional impact of visual disability from their perspective. The 36-item, 4-point unidimensional scale has potential as a complementary adjunct to objective clinical assessments in routine pediatric ophthalmology practice and in research.
