A Quality of Life instrument for carers of people with parkinsonism

Quality of life questionnaire for carers of people with Parkinsonism

PQoL Carers is a Quality of Life instrument for carers of people with parkinsonism that takes the form of a self-report questionnaire.

Description

Atypical parkinsonism (AP) has a considerable impact on the lives of not only the patients but also of their carers. The aim was to develop an instrument for assessing the quality of life (QoL) of carers of patients with AP.

A 40-item pool was generated from in-depth interviews with carers of patients with AP and a thorough review of the existing literature and consultation with movement disorder experts. The items were further refined and reduced using the results of pilot testing and validation studies.

The 26-item Parkinsonism Carers QoL (PQoL Carer) is a concise instrument with adequate psychometric qualities that can be used for clinical and research purposes.

Please note that **translated versions of PQoL Carers** are available for purchase. For more details, please contact us via the "Contact us" section.

Placing an order on XIP

To license this product, please select the **appropriate licence option** on the right-hand side of this page. Terms can be previewed from the "Preview terms" link.

To place an order, please locate the [Sign-in](#) or [Register](#) options on the top right side of this page. You can either sign in to your existing account or register for a new now. **Please note that your account should be created using your academic/ institutional e-mail address.**

Before completing an order and accessing the material, each order requires prior authorization, with processing times varying depending on the product.

For additional guidance on how to create an account and place an order, refer to the [FAQs](#).
