

Adolescents' Food Habits Checklist (AFHC)

The Adolescents' Food Habit Checklist (AFHC) is a self-report psychometric tool for the adolescent (>13-25 y population) to measure healthy eating behaviour in situations in which they have a degree of personal control.

The Adolescent Food Habits Checklist (AFHC) is a 23-item checklist that aims to provide a measure of adolescent healthy eating behaviour with reference to those situations in which young people are likely to have a degree of personal control. It addresses areas in which adolescents may be able to affect how closely their diets conform to guidelines on healthy eating, with reference to the avoidance of specific energy-dense foods, selection of low-fat alternatives, consumption of fruit and vegetables and snacking behaviour. It has a good level of convergent validity and high internal and test-retest reliability.

Placing an order on XIP

To license this product, please select the **appropriate licence option** on the right-hand side of this page. Terms can be previewed from the "Preview terms" link.

To place an order, please locate the **Sign-in** or **Register** options on the top right side of this page. You can either sign in to your existing account or register for a new now. **Please note that your account should be created using your academic/ institutional e-mail address.**

Before completing an order and accessing the material, each order requires prior authorization, with processing times varying depending on the product.
