

Brain Explorer

This research app was designed to assess cognitive and decision-making preferences on handheld electronic devices. It contains short and entertaining games that allow to assess different decision making and learning styles.

Brain Explorer is a smartphone app for Apple and Android handheld electronic devices. It contains a series of cognitive tasks, which allow the assessment of decision making and related cognitive processes. The assessments are implemented as brief, entertaining games that will be played by the user and which can provide information about their cognitive and decision-making preferences to researchers. By deploying them as an app, it facilitates data collection and width of deployment.
