

BRIGHTLIGHT: Health Economics

Health economics measures for the BRIGHTLIGHT study

BRIGHTLIGHT is a National Institute for Health Research (NIHR) funded study (RP-PG-1209-10013) evaluating whether specialist services for teenage cancer add value. Specialist teenage and young adult (TYA) cancer services were implemented in England & Wales in 2005. Anecdotally, professionals and patients say 'specialist care' is "better" for TYA cancer treatment. The BRIGHTLIGHT study has been carried out to evaluate how specialist services affect the success of treatment and how well young people return to normal life such as education or work after treatment.

The BRIGHTLIGHT study documents include the main survey, questionnaire for carers and health economic measures for use with young people aged 13 onwards. For further information about BRIGHTLIGHT please see the website: www.brightlightstudy.com

The Cost of Care and Cost Record questionnaires were designed to be administered when the young person was 6 months after diagnosis and is available for licensing now.

HEALTH ECONOMICS MEASURES

Cost of Care Questionnaire

The Cost of Care questionnaire collates information incurred as a result of a cancer diagnosis and requires the respondent to reflect back to the point of diagnosis. It

includes questions on travel costs, cost of medications and medical equipment, services that have been employed as a result of a cancer diagnosis and receipt of any benefits. This can be completed by the young person, or any nominated person who has access to this information.

Cost Record

The Cost Record prospectively records costs on a weekly basis incurred as a result of a cancer diagnosis. It includes questions on travel costs, cost of medications and medical equipment, services that have been employed as a result of a cancer diagnosis and receipt of any benefits. This can be completed by the young person, or any nominated person who has access to this information.
