

BRIGHTLIGHT: WAVE 1

The BRIGHTLIGHT study has been carried out to evaluate how specialist services affect the success of treatment and how well young people return to normal life such as education or work after treatment. The licensed documents include the main survey, questionnaire for carers and health economic measures for use with young people aged 13 onwards.

WAVE 1 survey materials for the BRIGHTLIGHT study

BRIGHTLIGHT is a National Institute for Health Research (NIHR) funded study (RP-PG-1209-10013) evaluating whether specialist services for teenage cancer add value. Specialist teenage and young adult (TYA) cancer services were implemented in England & Wales in 2005. Anecdotally, professionals and patients say 'specialist care' is "better" for TYA cancer treatment. The BRIGHTLIGHT study has been carried out to evaluate how specialist services affect the success of treatment and how well young people return to normal life such as education or work after treatment.

The BRIGHTLIGHT study documents include the main survey, questionnaire for carers and health economic measures for use with young people aged 13 onwards. The BRIGHTLIGHT Survey comprises three versions to enable changes in experience at five time points between 5 – 36 months after diagnosis to be sampled. The Survey is available as a computer-administered scripted paper version only, as this format is validated.

For further information about BRIGHTLIGHT please see the website: www.brightlightstudy.com

WAVE 1 which is administered at 5-7 months after diagnosis is available for licensing now.

WAVE 1

WAVE 1 Survey reflects core aspects of care delivery, including choice of route to diagnosis, place of care, entry into clinical trials and fertility. It has been developed so that questionnaires related to cancer are limited when treatment has ended; it focuses on education, relationships and emotional well-being. The Survey takes 40 minutes to administer.
